OSRAM

OTi DALI 210/220-240/24 1-4 CH P

24 V DALI Constant Voltage LED driver
Dimmable range 0/0,1% - 100%

Benefits

Long lasting and high reliability.
From 1 to 4 channels to arbitrarily distribute the power.
Suitable for installation under sunlight.
IP66/IP67, salt mist resistant and DC functionality.
AstroDim functionality for automatic turn on/off and dimming.

Applications

In building facades, luminous signage,
public squares and architecture lighting.
Suitable for indoor and outdoor SELV installation.

Approvals

When not printed on product label, they are under evaluation.

Housing material: natural anodized aluminum

L1	320 mm	Inter-axis spacing
B	69 mm	Width
H	37 mm	Height

Product Features

- 1 to 4 self-configuring DALI channels
- Lamp Failure detection
- Independent (Suitable for Class I luminaires)
- Smart Power Supply
- SELV, Vout: 24,7 V
- Wide ta range -30...+60°C
- Driver with output power range to 210 W
- Overload/Over temperature and Short circuit protection
- Tc max = 85 °C
- AstroDim functionality
- Dimmable via DALI interface
- Very low min dimming level: 0,1%
- High level surge protection: up to 6 kV (L-N), 8 kV (L/N-PE)
- Mains voltage: 220–240 Vac / 176–276 VDC
- 50'000 h lifetime at TC **
- 5 years guarantee*
- High IP protection (IP66/IP67)
- Output wire length up to 50 m

*10% cumulated failure, ** 24 h = 14 h ON 10 h Standby

Led wire length

The wire length from the ECG to the LED module at full load can reach 50 m.

Some combinations of cable length / section don't allow full power output. See below table for reference.

Choose a proper wire section to ensure that the LED module input voltage is at least 23 V.

Example with Pout = 210 W connected to only one channel.

		Cable length [m] 24.7 V					
		5	10	20	30	40	50
Cable section [mm ²]	0,5	118	60	30	20	15	12

Channel addressing procedure

AUTO ADDRESSING ON FIRST POWER UP

Driver performs auto channel detection on first power up. No magnet is needed for this operation.

STEP 1:

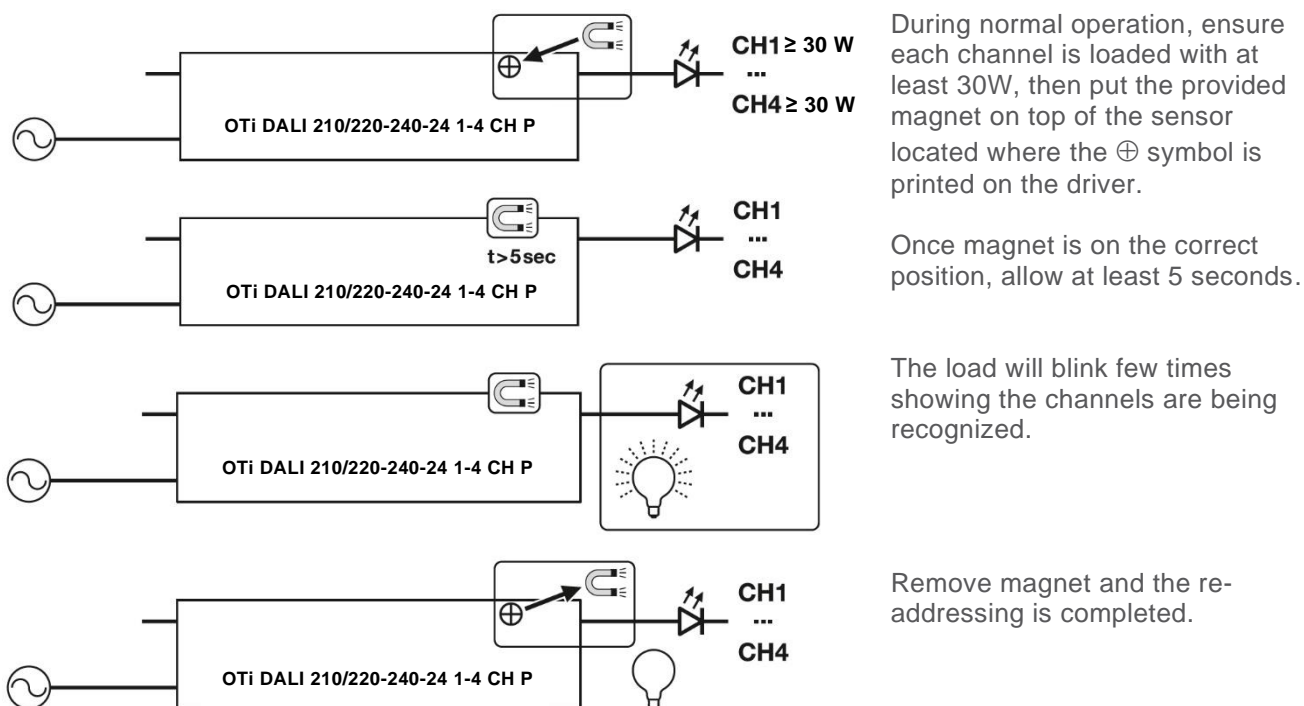

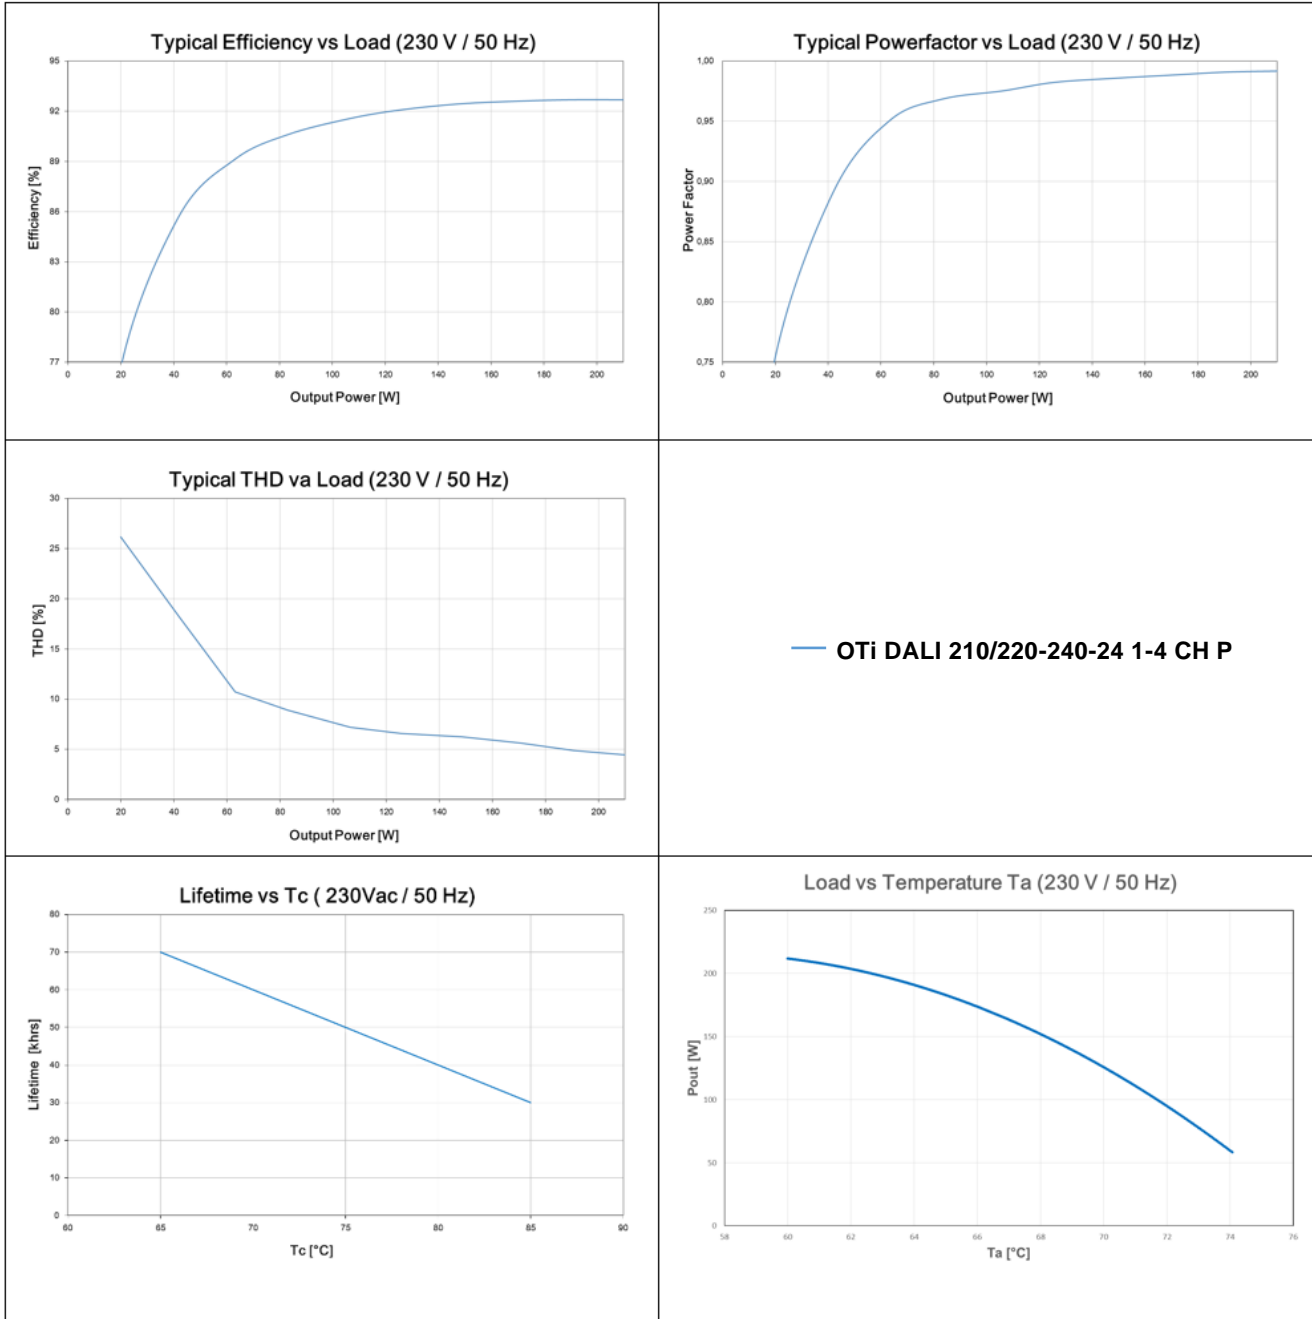

STEP 2:

ADDRESS ERROR FIXING OR RESET

Next procedure is needed only for re-addressing in case of installation error or reset. Driver must be under operation (not in stand-by).

Remarks

- **Product performances below minimal load condition:** the output power is still generated if the load is below the minimum output power (80 W on single channel or distributed), without any safety risk, but performances regarding THD, EMI, etc. are not guaranteed. See typical operation window graph for details.
- **Output short circuit protection:** short circuit current is limited without damaging the unit. The short circuit protection is self-restoring.
- **Output overload protection:** in case of overload (< 25%), the device automatically dims down the output to keep the power within 210 W and let the LED load to warm-up. When the overload exceeds the 25% of maximum nominal output power, the LED load will blink to manifest a fault condition.
- **Lamp failure detection:** minimum load per channel that doesn't trigger open circuit detection is 30 W.
- **No load operation:** do not put a switch between ECG and load.
- **Over temperature protection:** the driver is protected against temporary overheating, so it automatically dims down when T_c is exceeded. The protection is self-restoring.
- **Exit cables:** the supplied, internally wired cables cannot be replaced; if the cord is damaged, the LED driver must be replaced.
- **Waterproof:** the driver is designed for outdoor installation with IP66 / IP67 protection grade. Input and output cables must be connected by means of a sealed cable clamp.
- **Recommendations on how to dispose of it at the end of its life in line with Directive 2012/19/EU:** separate control gear must be disposed of, in accordance with WEEE, at certified waste disposal companies. For this purpose, recycling centres and take-back systems (CRSO) collection points are available in the trade or at private disposal companies that accept separate control gears free of charge. In this way, raw materials are conserved, and materials are recycled.
